

Broadband Follow-Through Executive summary

The objective was to follow through with the 2021 summer project partner, Thrive Regional Partnership, a non-profit based in Chattanooga. There was a second dataset collected during the summer on Internet Service Providers (ISO) that could be used to expand the interactive map. This data was handed over to Thrive in case they would like to add it in the map. Thrive was given a complete go-over on the summer project along with the location of all relevant files and data. To date, the partner has expressed satisfaction and expressed to bring a full closure to the project.

Future Planning of the partner to build upon the DataLab project was explored. They hope to have one go-to platform for their organization and audience. The partner is building a new platform on ArcGis for a different project, with the expectation to migrate the interactive map to ArcGis.
